No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description

This invention describes a novel method to manufacture a preparation of an active substance, where the active substance is surrounded by at least one layer consisting of a protein that is cross-linked by an enzyme chosen from the group of lipoxygenase, protein disulfide calculated by an disulfide reductase, throsine oxidase or sulfhydryl oxidases. Enzymes chosen from lipoxygenase, protein disulfide reductase, protein disulfide reductase, tyrosine oxidase and peroxidase, protein disulfide reductase, tyrosine oxidase and peroxidase, protein disulfide reductase, tyrosine oxidase or sulfhydryl oxidases, especially lysyl oxidase are useful for formulation of preparations of active substances. The method of the invention is preparations are useful as food additives or fodder or as pharmaceuticals. AAY51951-Y51962 represent fragments of the Pichia formulation are useful as food additives or fodder or as paramaceuticals. AAY51951-Y51962 represent fragments of the pichia formulation are used to illustrate the method of the

                                                                                                                                                                                                                                                                                                                                    Chlamydia species. The invention provides a composition that comprises at least two agents, where each of the agents is effective against a different phase of the chlamydial life cycle. The agents are selected from: (a) agents targetted against cryptic phase of chlamydial life cycle; (b) agents targetted against cryptic phase of chlamydial life cycle; (c) agents targetted against replicating phase of chlamydial life cycle; (d) probenicid, and (e) antiporphyric acid. The composition an animal or human and is applied until the animal or human tests megative for chlamydia infection. It is also used to treat biological material infected with Chlamydial Diagnostic kits for antibody assays against recombinant major outer membrane protein (MOMP), and for DNA amplification assays for chlamydial genes, are used to diagnose disease,
                                                                                                                                                                                                                                                                                                                   The invention relates to the diagnosis and management of infections by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to peptides AAB51512 - AAB51537 which represent conserved proteobacterial extracellular domains. Sequences AAB51538 - AAB51618 represent peptides homologous to YadA, a yersinia adhesin which is an important virulence determinant of the Yersinia species. The invention includes an antibody which binds to the proteobacterial extracellular peptides, and an immunogenic composition containing the antibody used as a vaccine to prevent infection by a proteobacteria. The polypeptides and antibodies are useful in the treatment and prevention of proteobacterial infections. The polypeptides can also be used to identify compounds which antagonize the binding of a bacterial adhesion to its ligand. The host cell can be used to produce
                                                                               from lipoxygenases, protein disulfide isomerases, phenol oxidases and peroxidases, lysyl oxidases, protein disulfide isomerases, tyrosine oxidases or sulfihydryl oxidases is used to formulate compositions containing active ingredients. (I) is useful for crosslinking protein layers surrounding active ingredients in food, animal feed and pharmaceutical products. The compositions can be formulated without using chemical crosslinking agents. AAY51963-Y51974 represent fragments of the Pichia pastoris lysyl oxidase protein which is used to
                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         An isolated polypeptide conserved in proteobacterial extracellular domains used in the treatment and prevention of bacterial infections
                                                                   invention describes a novel method where an enzyme (I) selected
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Proteobacteria; extracellular domain; virulence determinant; YadA; adhesin; proteobacterial infection prevention; vaccine.

This sequence represents a human secreted protein, and is expressed ubiquitously, including T-cells and amygdala. The DNA sequences of the invention and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions

can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the DNA sequences. Specific uses are described for each of the DNA sequences and the encoded proteins, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer.
                                                                                         tumours, neurological disorders, in analysis of treatment of cancer, deficiencies, blood disorders, leukaemias, diseases of the immune system (including allergies or asthma), hepatic disease, Alzheimer's and cognitive disorders, schizophrenia, prostate diseases, autoimmune disorders and AIDS. The polypeptides are also useful for identifying their binding partners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence for potential R1 and R2 peptide #4 can be used to form a peptide dimer that binds and activates the erythropoietin receptor (BPO-R). Various possible peptide sequences for R1 and R2 (AAMU05301-AAU0539) are described in the present invention. Also described is method for synthesising such peptide dimers which act as EPO-R agonists. The method is useful for synthesising peptide dimers which are useful, in vitro, as tools for understanding the biological role of EPO, in the development of other compounds that bind to SPO-R, as commercial research reagents for various medical research and diagnostic applications, for detecting EPO receptors on living cells, for treatment of disorders associated with a deficiency of EPO, such as end-stage renal failure/dialysis, anaemia associated with AIDS and chroatc inflammatory diseases, autoimmune diseases and malignancies,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthesizing peptide dimer useful as erythropoietin receptor agonist by binding linking group with functional groups as initiation sites for peptide synthesis to support and synthesizing peptide segments -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and chronic inflammatory diseases, autoimmune diseases and malignancies, and for boosting the red blood count of a patient prior to surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthesizing peptide dimer useful as erythropoletin receptor agonist by binding linking group with functional groups as initiation sites for peptide synthesis to support and synthesizing peptide segments .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence for potential R1 and R2 peptide #3 can be used to form a peptide dimer that binds and activates the erythropoletin receptor (EPO-R). Various possible peptide sequences for R1 and R2 (AAU05301-AAU05393) are described in the present invention. Also described is a method for synthesising such peptide dimers which act as EPO-R agonists. The method is useful for synthesising peptide dimers which are useful, in vitro, as tools for understanding the biological role of EPO, in the development of other compounds that bind to EPO-R, as commercial research reagents for various medical research and diagnostic applications, for detecting EPO receptors on living cells, for treatment of disorders associated with a deficiency of EPO, such as end-stage renal failure/dialysis, anaemia associated with AIDS

The present sequence for potential R1 and R2 peptide #9 can be used to form a peptide dimer that binds and activates the erythropotetin receptor (EPO-R). Various possible peptide sequences for R1 and R2 receptor (EPO-R). Various possible peptide sequences for R1 and R2 (AAU05301-AAU05303) are described in the present invention. Also described is a method for synthesising such peptide dimers which are useful, in vitro, as useful for synthesising peptide dimers which are useful, in vitro, as tools for understanding the biological role of EPO, in the development of other compounds that bind to EPO-R, as commercial research reagents for various medical research and diagnostic applications, for detecting EPO receptors on 114ing cells, for treatment of disorders associated with a deficiency of EPO, such as end-stage renal failure/dialysis, anaemia associated with AIDS and chronic inflammatory diseases, autoimmune diseases and malignancies, and for boosting the red blood count of a patient prior to surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthesizing peptide dimer useful as erythropoietin receptor agonist binding linking group with functional groups as initiation sites for peptide synthesis to support and synthesizing peptide segments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; erythropoletin receptor; EPO-R; EPO agonist; EPO deficiency; renal failure; anaemia; chronic inflammatory disease; autoimmune disease; malignancy; red blood count.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R1 and R2 peptide #2 useful as erythropoietin receptor agonist.
                                            Rl and R2 peptide #9 useful as erythropoletin receptor agonist.
                                                                                     Human; erythropoietin receptor; EPO-R; EPO agonist; El

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence for potential R1 and R2 peptide #1 can be used to form a peptide dimer that binds and activates the erythropoietin receptor (EPO-R). Various possible peptide sequences for R1 and R2 (AAU05301-AAU05393) are described in the present invention. Also described is a method for synthesising such peptide dimers which act as EPO-R agonists. The method is useful for synthesising peptide dimers which are useful, in vitro, as tools for understanding the blological role of EPO, in the development of other compounds that bind to EPO-R, as commercial research reagents for various medical research and diagnostic applications, for detecting EPO receptors on living cells, for treatment of disorders associated with a deficiency of EPO, such as end stage renal failure/dialysis, anaemia associated with AIDS and chronic inflammatory diseases, autoimmune diseases and malignancies, and for boosting the red blood count of a patient prior to surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthesizing peptide dimer useful as erythropoietin receptor agonist by binding linking group with functional groups as initiation sites for peptide synthesis to support and synthesizing peptide segments -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence for potential R1 and R2 peptide #2 can be used to form a peptide dimer that binds and activates the erythropoietin receptor (EPO-R). Various possible peptide sequences for R1 and R2 (AAU05301-AAU05393) are described in the present invention. Also described is a method for synthesising uch peptide dimers which act as EPO-R agonists. The method is useful for synthesising peptide dimers which are useful, in vitro, as tools for understanding the biological role of EPO, in the development of other compounds that bind to EPO-R, as commercial research reagents for various medical research and diagnostic applications, for detecting EPO receptors on living and diagnostic applications, for detecting EPO receptors on living such as end-stage renal failure/dialysis, anaemia associated with AIDS and chronic inflammatory diseases, autoimmune diseases and malignancies, and for boosting the red blood count of a patient prior to surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ij

```
The invention relates to an immunogenic peptide derived from hepatitis B surface antigen (HBsAg) which competes with the hepatitis B surface antigen/annexin V interaction or which binds a compound or antibody competing with the hepatitis B surface antigen/annexin V interaction.

Also claimed are: (1) a combination of the immunogenic peptide and a negatively charged phospholipid; (2) a peptide composition comprising the immunogenic peptide; (3) a vaccine composition comprising the immunogenic peptide as an active substance; (4) antibodies which specifically bind to the peptide and inhibit binding of HBsAg to annexin V, and (5) a therapeutic composition comprising as an active substance the antibodies of (4).

The vaccine of (3), and the therapeutic composition of (5), can be used as an innoculum to vaccinate humans against an infection with hepatitis B and/or hepatitis Delta virus The immunogenic peptide can be used in a method to detect antibodies which are capable of competing with the hepatitis B and/or hepatitis Delta virus surface antigen/annexin V interaction. The immunogenic peptide can also be used to screen for interaction. The immunogenic peptide can also be used to screen for drugs which block the binding between annexin V and the peptide, and as a therapeutic to treat humans infected with hepatitis B virus and/or hepatitis Delta virus. The present sequence represents one of the peptide fragments derived from HBsAg which were synthesised to map the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        qq
                                                                                          The present sequence for potential R1 and R2 peptide #47 can be used to form a peptide dimer that binds and activates the erythropoletin receptor (EPO-R). Various possible peptide sequences for R1 and R2 (AAU05301-AAU05303) are described in the present invention. Also described is a method for synthesising such peptide dimers which are useful. The method is useful for synthesising peptide dimers which are useful, in vitro, as tools for understanding the biological role of EPO, in the development of other compounds that bind to EPO-R, as commercial research reagents for various medical research and diagnostic applications, for detecting EPO receptors on living cells, for treatment of disorders associated with a deficiency of EPO, such as end-stage renal failure/dialysis, anaemia associated with AIDS and chronic inflammatory diseases, autoimmune diseases and malignancies, and for boosting the red blood count of a patient prior to surgery.
                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          APC gene; Adenomatous Polyposis Coli gene; human; chromosome 5q21; familial adenomatous polyposis; FAP locus; Gardner's syndrome; GS; sporadic tumour; adenoma; carcinoma; cancer; lung; breast; colon; rectum; bladder; liver; sarcoma; stomach; prostate; leukaemia; lymphoma; tumour suppressor; anti-APC antibody; detection; diagnosis; prognosis; genetic predisposition; drug screening; DP2.5; repeat region.
                       Synthesizing peptide dimer useful as erythropoietin receptor agonist by binding linking group with functional groups as initiation sites for peptide synthesis to support and synthesizing peptide segments .
                                                                                                                                                                                                                                                                                                                                       Gaps

Polyposis Coli (APC) protein in a sample. The method involves contacting the sample with antibodies which specifically binds to the contacting the sample with antibodies which specifically binds to the protein, and detecting an APC-antibody complex. Mutations in the APC protein, and detecting an APC-antibody complex. Mutations in the APC gene play a role in tumorigenesis, indicating that it is a tumour suppressor gene. It is located on chromosome 5q21, which corresponds to the FAP (familial adenomatous polyposis) locus. FAP is an autosomal dominant inherited disease in which affected individuals develop hundreds to thousands of adenomatous polyps in the colon and rectum, some of which progress to malignancy. The FAP locus is often found to be deleted in sporadic (i.e., non-familial) adenomas and carcinomas, and chromosome 5g deletions have also been observed in tumours of the lung, breast, colon, rectum, bladder, liver, sarcomas, stomach, and prostate, and in leukaemias and lymphomas. Although the FAP locus contains several other genes such as FER, FER, TER, TER, and APC, it is thought that mutations in the APC gene play a key role in the development of FAP and sporadic tumours. The method is useful for detecting appropriation to progress in mour sample. The method is useful for diagnosing or prognosing negative for detecting a genetic prediagosition to progress to the method is useful for diagnosing or prognosing negative for detecting a genetic prediagosition to progress to the progress of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; beta-amyloid precursor protein; beta-APP; diagnosis; cancer; frameshift mutation; age-related disease; neurodegenerative disorder; Alzheimer's disease; Down's syndrome; myotohic dystrophy; neuronal; Huntington's disease; multiple sclerosis; alcoholic liver disease; diabetes mellitus type II; microtubule associated protein; Tau; Biguitin B; apolipoprotein E; MAP2; neurofilament-L; neurofilament-M; neurofilament-E; presenilin I; presenilin II; cellular tumour antigen; glial fibrillary acidic protein; GFAPP; p53; semaphorin III; HUPF-I; bcl-2; B-cell leukemial/ymphoma 2 proto-oncogene; HMGP-C; NSP-A; high mobility group protein-C; neuroendocrine specific protein A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cancer, for detecting germline and somatic alteration of wild-type APC genes, and for testing therapeutic agents for the ability to suppress tumours. Sequences AAB23016-B23022 represent seven 20 amino acid repeats
                                                                                                               Detecting Adenomatous Polyposis Coli (APC) protein in a sample for diagnosing cancers, involves contacting the sample with antibodies that specifically bind to APC protein and detecting the complex formed -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention relates to a novel method for detecting Adenomatous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ÷
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 33.5; DB 21; Length 20; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, sepecially cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's disease, Down's syndrome, myotonic dystrophy, Huntington's disease, alzoholic liver disease, diabetes mellitus type II and many others listed) or susceptibility to these disorders. The method allows a definitive diagnosis of Alzheimer's disease in living patients, allows a definitive diagnosis of Alzheimer's disease in living patients, and many others listed or the observation that disease may be caused by mutations in RNA rather than DNA. The invention describes the used of neuronal system RNA molecules, specifically proteins including beta-amyloid precursor protein (beta-APP), the microtubule associated protein 2 (MAP2), neurofilament-L, neurofilament-M, envofilament-F, presentlin 1, presentlin II, glial fibrillary acidic protein (GFAP), the cellular tumour antigen p53, B-cell leukemia/lumphoma 2 (bc1-2) proto-oncogene, semaphorin III, HUPF-I, high mobility group protein-C (HMGP-C) and neuroendocrine specific protein A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                        Diagnosing disease by detecting frameshift mutations in RNA or corresponding protein mutations - used to diagnose cancer and neurological diseases, particularly Alzheimer's disease, and also for treatment and prevention with specific ribozymes or wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

```
The N-terminal region of P. minioluteum dextranase was sequenced using the Edian degradation method. Dextranase may be secreted as a recombinant protein by the transformed host, Pichia pastoris. The recombinant enzyme has higher thermal stability than the natural P. minioluteum enzyme (specifically an optimum temp. of 55-60 deg and a half-life of 7.6 hr at 50 deg), and it can be used in the sugar industry for sugarcane juice dextran hydrolysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Sequence 47, Application US/08221583
Patent No. 5486595
GENERAL INFORMATION:
APPLICANT: Heavner, George A.
TITLE OF INVENTION: Tumor Necrosis Factor Inhibitors
NUMBER OF SEQUENCES: 62
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5486595ris
STREET: One Liberty Place 46th Floor
CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               53.0%; Score 71; DB 5; Length 15; 100.0%; Pred. Sequence 141, Application US/08934915

Patent No. 5932412

GENERAL INFORMATION:

APPLICANT: DILLNER, JOAKIM

APPLICANT: CHENG, HWEE-MING

TITLE OF INVENTION: PAPILLCMAVIRUS 1, 5, 6, 8,

TITLE OF INVENTION: DIAGNOVIRUS 1, 5, 6, 8,

TITLE OF INVENTION: 11, 16, 18, 31, 33 AND 56,

TITLE OF INVENTION: DIAGNOVIRUS 1, 3, 8, 8,

TITLE OF INVENTION: DIAGNOVIRUS 2, 9, 8,

TITLE OF INVENTION: DIAGNOVIRUS 3, 33 AND 56,

TITLE OF INVENTION: DIAGNOVIRUS 5, 8,

TITLE OF INVENTION: DIAGNOVIRUS 5, 8,

"An unusual structural motif of antimicrobial peptides containing end-to-end macrocycle and cystine-knot disulfides.";

Proc. Natl. Acad. Sci. U.S.A. 96:8913-8918(1999).

-! FUNCTION: PROBABLY PARTICIPATES IN A PLANT DEFENSE MECHANISM. HAS ANTIBIOTIC ACTIVITY. INHIBITS NEUROTENSIN BINDING. ACTIVE AGAINST BOTH GRAM-POSITIVE AND GRAM-NEGATIVE BACTERIA.

-!- PTM: THIS IS A CYCLIC PEPTIDE.

-! SIMILARITY: BELONGS TO THE CYCLOTIDE FAMILY.

-! CAUTION: THIS PEPTIDE BEING CYCLIC, ITS SEQUENCE WAS ARBITRARILY CHOSEN TO START AT THE POSITION SHOWN BELOW. AS THE DNA SEQUENCE FROM WHICH IT IS DERIVED IS NOT YET KNOWN, IT IS NOT POSSIBLE TO A ASSIGN THE CORRECT N- AND C-TERMINI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             J. Biol. Chem. 268:6641-6648(1993).
-!- FUNCTION: HAS BACTERICIDAL ACTIVITY. ACTIVE AGAINST E.COLI ML35
--- BUT NOT AGAINST S.AUREUS 502A.
--- TISSUE SPECIFICITY: NEUTROPHILIC GRANULES.
--- SIMILARITY: BELONGS TO THE BETA-DEFENSIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             STRAIN-HEREFORD; TISSUE-Neutrophils;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Oppermenn U.C.T., Maser E.;
"Characterization of a 3 alpha-hydroxysteroid dehydrogenase/carbonyl reductase from the gram-negative bacterium Comamonas testosteroni.";
Eur. J. Blochem. 24:744-749(1996).

1- FUNCTION: ALONG WITH THE 3 ALPHA-HYDROXYSTEROID DEHYDROGENASE AND 3-0XO-REDUCTASE ACTIVITIES TOWARDS A VARIETY OF CIS OR TRANS FUSED A/B RING STEROIDS, IT ALSO REDUCES SEVERAL XENOBIOTIC CARBONYL COMPOUNDS, INCLUDING A METYRAPONE-BASED CLASS OF INSECTICIDES, TO THE RESPECTIVE ALCOHOL METABOLITES.

1- CATALYTIC ACTIVITY: ANDROSTERONE + NAD(P)(+) = 5-ALPHA-ANDROSTANE-3, 17-DIONE + NAD(P)(+).

5-ALPHA-ANDROSTANE-3, 17-DIONE + NAD(P)(+).

1- SUBCELLULAR LOCATION: CYTOPLASMIC.

1- SIMILARITY: BELONGS TO THE SHORT-CHAIN DEHYDROGENASES/REDUCTASES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Spermatophyta, Magnollophyta, eudicotyledons; core eudicots; Rosidae, eurosids I; Fabales; Fabaceae; Papillonoideae, Crotalarieae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
